# AGED AND NEW WOOD FLOORS

# EDITIONS

**DESIGNS** At first glance, these floors may look like the norm, but in fact they are anything but. Editions distils the very best of our skills and craft into a few extra-special floors that stand out from the rest. With a wide variety of tones available in plank and herringbone designs you are bound to find the one you love. Expect natural variations throughout each floor, as these floors are handcrafted and not mass manufactured.

**CRAFT** They have all been lovingly designed and handmade at our Cheshire workshops and are not limited to the restrictions of factory finished floors.

**SUSTAINABLE** The wood used in our Editions collection is the very best, sustainably sourced, European Oak, Douglas Fir, Larch and American Black Walnut all with a 6mm wear layer

**HANDMADE** Skilled handcrafting includes soft-rolled edges, soft sanding, grain texturing, bleaching and washing to enhance the natural beauty of your wood floor. This means no two pieces of these floors are the same.

**HAND FINISHED** Choose from rich, deeply polished Burnished Hardwax Oil or a super matt and dry-looking Naked Skin Lacquer. Both are equally beautiful, whilst being durable and practical to live with. Editions also includes Satin Lacquered floors and those finished with Oilwood Traffic. Each and every application is air dried over a number of days. This is a slow cured approach. The look and durability develops slowly as each individual application is completed.

**POLISHED** Burnished Hardwax oil is polished to achieve a burnished patina. This gives unrivalled depth and protection to your floor.

**SEAMLESS** Long boards and wide widths mean fewer joints and seams. This is the mark of a true fine wood floor.

**EASY TO INSTALL** These fully finished floors do not need site finishing and are easy to maintain. They are suitable for high-traffic areas, but please be aware that the look will change over time as the finish oxidizes and matts down through footfall and everyday use.

Abbot Plank

# EDITIONS

**ARCHITECTURAL ELEMENTS** A range of complementary skirtings, profiles, stair nosings and other architectural elements add the final detail to finish your floor. **These are created to compliment your floor, not directly match every element.** Please refer to the Architectural Details document for further details.

**LONG LIFE** Our durable 6mm hardwood wear layer is the thickest available.

**STABILITY** For your peace of mind, the 2-ply engineered construction of Editions flooring is made with durable furniture-grade birch plywood.

**TRUST** For your peace of mind, this collection comes with 100% FSC®-certified environmental or alternative accreditation.

**WARM FLOOR** Editions is suitable for installation over underfloor heating (please see guidelines within Living With Your Floor document).

**EASY INSTALLATION** Float, nail or fully bond this structural floor (Herringbone and panels fully bond only).

**OUR MASTER CRAFTSMAN'S NOTES** 'Otis is my favourite Editions floor,' says our master craftsman. 'It's a masterpiece with a focus on the ultimate raw-looking wood floor. Gently rolled edges, a finish-free appearance, subtly highlighted grain patterns distinguish its lovely wide, long boards. The result is a floor that is stylishly understated and totally natural. This simple looking floor has taken many years to perfect. It is super durable, very practical and makes living with nature an easy pleasure. I hope you enjoy living with it as much as I've enjoyed crafting it for you.'

**INDUSTRIOUS** It takes real, traditional 'industry' to make these floors. They take effort, expertise, experience and lots of hours of hard work. The result? A floor packed full of innovation and expertly executed creative ideas to delight you.

**WOODWORKS OAK** Oak from northern Europe is renowned for its wide variety of gorgeous grain features. We source the widest and longest material for this collection.

**LOCAL** Every Woodworks floor is produced at our Cheshire workshops using the finest hardwoods sourced sustainably from Great Britain, Europe and North America.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Monroe.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

## DETAILS

European oak / American Black walnut	Heath	Hockenhall
Larch / Douglas Fir	Manor House	Monroe

# AGED

**NAMING CONVENTION** All Aged floors are named after locations in the Quercy region, Southern France, as this is where all of the wood for the collection comes from.

**DESIGNS** Emulating wood floors that have been walked on for centuries, we've crafted our Aged wood floors to embody all the characteristics of our favourite antique wood floors. Wide planks, herringbone, chevron and Parquet de Versailles give you considerable design scope.

**PARQUET DE VERSAILLES** Our extraordinary Parquet de Versailles design is registered to Woodworks and cannot be found in any other floor, or anywhere else. We hand cut the elements within our panels and are the only creators in the world to match each element from panel to panel. These panels are crafted from the finest antique, reclaimed and new materials and are unmatched in quality.

**CRAFTED** Not just 'made', but designed, developed and handmade by our master craftsman.

**HANDMADE** When we craft your Aged floors, we connect to each piece of wood, its unique peculiarities, lines, curls, veins and innate beauty. And as we do so, we find a way to help its personality shine. **Each is handcrafted, meaning no two elements will ever be the exact same**, and there will be a variety of natural changes and variation within a single floor, and from batch-to-batch.

**NICE SURPRISES** Shadows of saw marks, soft rolled edges, scrubbed knots, natural end cracks and lovely broad medullary rays combine to give you a stylish wood floor.

**WOODWORKS AGED OAK** We only select the finest oak for your floor. The oak we use in our Aged floors is through-and-through sawn to maximise the variety of grain texture across your floor. The medullary rays that flare out from a sound heart running down the centre of the planks are particularly special. **We then leave the raw boards outside to season for up to 24 months. During this time the oak loses its tension, the fibres settle and the knots harden.** Only then is this beautiful oak ready to be made into your Woodworks Aged floor.

**HAND FINISHED** Choose from a rich, deeply polished Burnished Hardwax Oil or a dry-looking super matt Naked Skin Lacquer. **Finish options are slow cured for a natural feel that is very durable.** Bespoke finishing options are available for these floors, but please understand that any changes will have an effect on the overall appearance of your floor. This could be anything from subtle to dramatic, and a change in finish must be signed off by the customer after viewing a sample in person.

**HASSLE-FREE** These are fully finished floors that need no site finishing and are easy to maintain.

Rouby Plank

# AGED

**ARCHITECTURAL ELEMENTS** Choose from a range of skirtings, profiles, stair nosings and other architectural elements that have been **crafted to complement your floor.**

**HONEST** A hardwearing 6mm hardwood wear layer is our standard. This means the floor can be sanded down as required throughout the years.

**STABILITY** The 2-ply engineered construction is made with furniture-grade birch plywood for long-term stability.

**TRUST** For your peace of mind, this collection is UKTR certified.

**WARM FLOOR** This flooring is suitable for installation over underfloor heating (please see guidelines within Living With Your Floor document.)

**EASY TO INSTALL** Float, nail or fully bond this structural floor (Herringbone and panels fully bond only).

**LOCAL** Your Aged floor is produced at our workshops in Britain with the finest sustainable hardwoods sourced from finest sustainable hardwoods sourced from Quercy, France.

**TEXTURE** The undulating texture of an Aged floor is part of our Woodworks ‘house style’. This texture is carefully worked by hand to accentuate the natural shape and movement of the French Oak. This movement is much more valuable and pronounced than that found in Ted Todd flooring and varies much more, both within a single element, and from board to board.

**HAND ROLLED EDGE** These floors are punctuated with a hand-rolled edge. Each corner and edge is carefully worked by hand, rolling a metal pin along each outer to create soft, aged edges. This edge detail gives a pillow effect to each element, for the most natural movement across the entire floor. This edge detail is much more traditional than a machine-created bevel and each element is unique as a result.

**MASTER CRAFTSMAN'S SELECTION** Our master craftsman recommends the Lauzes herringbone and plank for its pure bleached-out tones with minimal yellow pigmentation: 'It's stunning in so many applications.'

**PIONEERING, INNOVATIVE AND INDUSTRIOUS** This collection is packed full of all the core values that endear our products to discerning specifiers and property owners like you.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Champagney.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

# ENGLISH NATIVE TIMBERS

**NAMING CONVENTION** Native Timbers has a nautical theme and all floors are named after English ships and ship parts.

**DESIGNS** Galion embodies all the features of a centuries-old floor using exceptional quality new English Oak. The timber is hard, heavy and durable. Fine in texture with an open lively grain, it has been carefully seasoned and worked to a fine finish with a rich patina. Recently we have added Elias and Argo, both of which are crafted from the same wonderful English Oak.

**HANDMADE** Perfectly replicating the elegance and provenance of old English Oak floors, made by hand in our Cheshire workshops.

**NICE SURPRISES** Skip sawn with scrubbed knots and an undulating texture. Quarter sawn to reveal the wood's beautiful medullary rays. The shape of these boards represent the very best possible with new woods. Given that this wild grown English Oak is a natural material, there will be an incredible amount of natural variation across the overall floor.

**WOODWORKS ENGLISH OAK** To make these floors our specialist Woodworks division acquired some huge English Oak logs. Our craftsmen got to work making a remarkable engineered floor that is up to 3.5m long and 260mm wide, supplied in random sizes. (consistent sizing can be supplied, but costs vary) The surface has been expertly polished to create a patina that is true to the original.

**HAND FINISHED** Galion has deep warm tones and is burnished with hardwax oil, expertly polished creating an original patina.

**HASSLE-FREE** This is a fully finished floor that needs no site finishing and is easy to maintain.

**ARCHITECTURAL ELEMENTS** Choose from a range of skirtings, profiles, stair nosings and other architectural elements that have been crafted to complement your floor.

# ENGLISH NATIVE TIMBERS

**HONEST** A hardwearing 4-6mm hardwood wear layer. This means the floor can be sanded down as required throughout the years. The wear layer differs due to the extreme undulating texture of these boards.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Galion.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

**STABILITY** The 2-ply engineered construction is made with furniture-grade birch plywood for long-term stability.

**WARM FLOOR** This flooring is suitable for installation over underfloor heating (please see guidelines).

**EASY TO INSTALL** Float, nail or fully bond this structural floor (Herringbone and panels fully bond only).

**LOCAL** Your Woodworks floor is produced at our workshops in Britain with the finest sustainable hardwoods sourced from Great Britain, Europe and North America.

# SUPERWIDE

**NAMING CONVENTION** The names in the Superwide collection are colour-based with each name reflecting something of the same colour as the floor.

**DESIGN** Statement floors with true modernity, these Superwide planks and oversize herringbone blocks add an architectural emphasis to any interior.

**NOW IN SELECT GRADE** Select is cleaner than Nature (and costs more) but this does not eliminate all natural variation, and natural changes from board to board should be anticipated. Be sure to compare like-for-like to fully understand the difference in their look.

**GRAIN** Look forward to enjoying gorgeous open grain patterns with warm oak tones. Naturally, we only select the very best materials for this floor. Lovingly soft brushing this wood is one of our secrets to highlight the oak's beautiful natural grain patterns.

**STATEMENT** These are statement floors for statement projects. They accentuate big spaces, make them feel extra special and help maximise the impact of your design flair.

**SEAMLESS** For classic, understated elegance and simplicity, the long board lengths reduce the number of seams in this super wide plank floor. It's simply stunning!

**OVERSIZE** The 600 x 200mm herringbone format of Superwide is made in classic 3 x 1 proportions, but in an extra special size. This works remarkably well and could be just what you need to give your project a new dimension.

**WOODWORKS OAK** For Superwide, we source slow-grown oak for its massive dimensions and 'Wagneresque' impact. We also craft Superwide floors from Douglas Fir and American Black Walnut. These planks are up to an impressive 3m long and 300mm wide. We season all this oak for over 12 months. Why? Because long seasoning is important for wide dimension floors. It ensures that the oak loses its natural tensions and is vital to achieve optimum stability in your Superwide floor. 300mm wide, with wider options available through our bespoke service.

**HAND FINISHED** Choose from a rich, deeply polished Burnished Hardwax Oil or dry-looking super-matt Naked Skin Lacquer. All finish options are slow cured for a natural feel that is very durable.

# SUPERWIDE

**ARCHITECTURAL ELEMENTS** A range of skirtings, profiles, stair nosings and other architectural elements complement your floor and ensure its stylish integration with other interior elements.

**LONG LIFE** For your peace of mind, the 6mm hardwood wear layer is the thickest available.

**STABILITY** Our 2-ply engineered construction is made with high-quality furniture-grade birch plywood for long-term stability.

**TRUST** For your peace of mind, this collection comes with 100% FSC®-certified environmental accreditation (or equivalent).

**WARM FLOOR** Superwide flooring is suitable for installation over underfloor heating (please see guidelines within Living With Your Floor document.)

**EASY INSTALLATION** You can float, nail or fully bond this structural floor (Herringbone fully bond only) depending on the requirements of the project.

**WE'RE LOCAL** Your Woodworks floor is produced at our Cheshire workshops using the finest sustainably sourced hardwoods from Great Britain, Europe and North America.

**PIONEERING FLOORING** Back in 1998, we were the first people to work with 300mm-wide engineered planks. We have unrivalled experience and expertise in this area. This was an industry first, as narrow maple strip floors were the standard at the time.

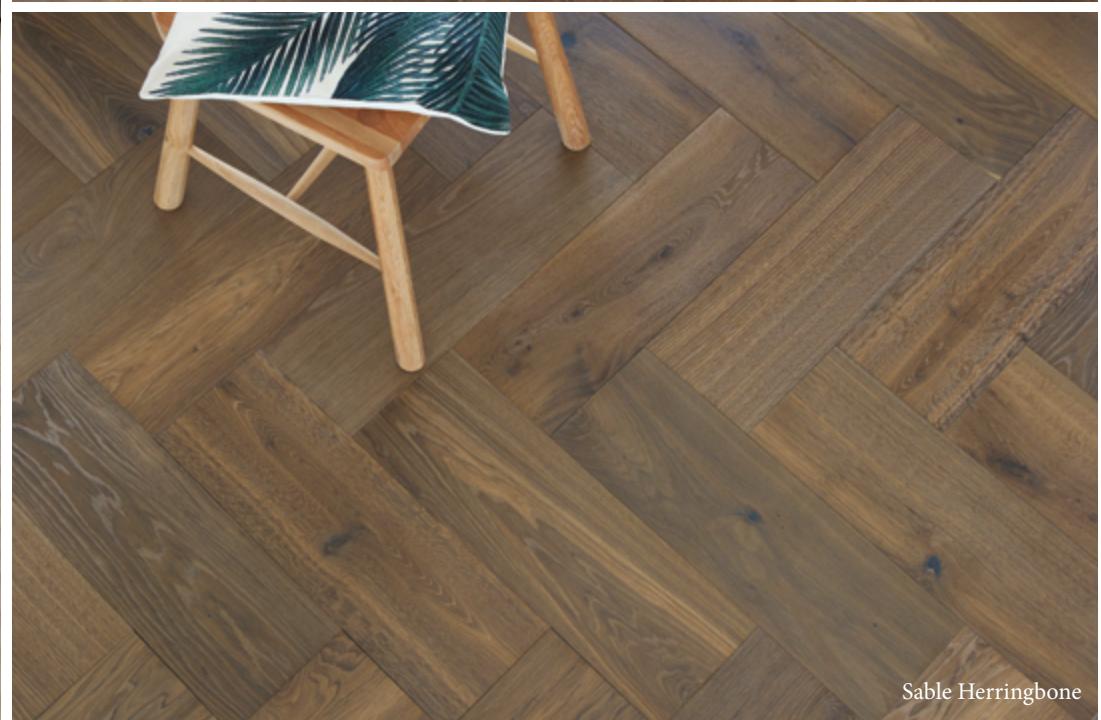

**NOW IN SELECT GRADE** We now provide our Superwide floors in a higher grade, Select. We found that people were looking for a cleaner, fresher look with less character and natural variation, so we now offer Select Grade. The Select grading strikes a great balance between the calmness of a Prime Grade and the natural character of a Nature Grade floor.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Truffle.

## SAMPLES

Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

PTO - Packed To Order

# URBAN

**NAMING CONVENTION** Urban floors are named after areas of New York and the United States to reflect the landscape to their texture.

**THERE'S CHARACTER IN CONTRADICTION** We think you'll agree that this is the most 'imperfectly perfect' floor for any interior type.

**RECLAIMED** Urban embodies all the values you love about reclaimed floors: a gently worn surface and hand-rolled edges, but with the consistency and reliability of a new wood floor. Whilst there are less variations present than in a reclaimed floor, the skip sawn markings are applied at random and inconsistencies should be expected.

**ELEGANCE** The sawn texture of Urban is elegantly distressed for enduring good looks in a wide variety of interiors.

**MIX DESIGNS** Because you can combine plank, herringbone and chevron designs, you have all the creative tools to create a stylish look that's personal to you. Choose from four natural tones, a unique copper finish or in-plank chevron and criss-cross designs.

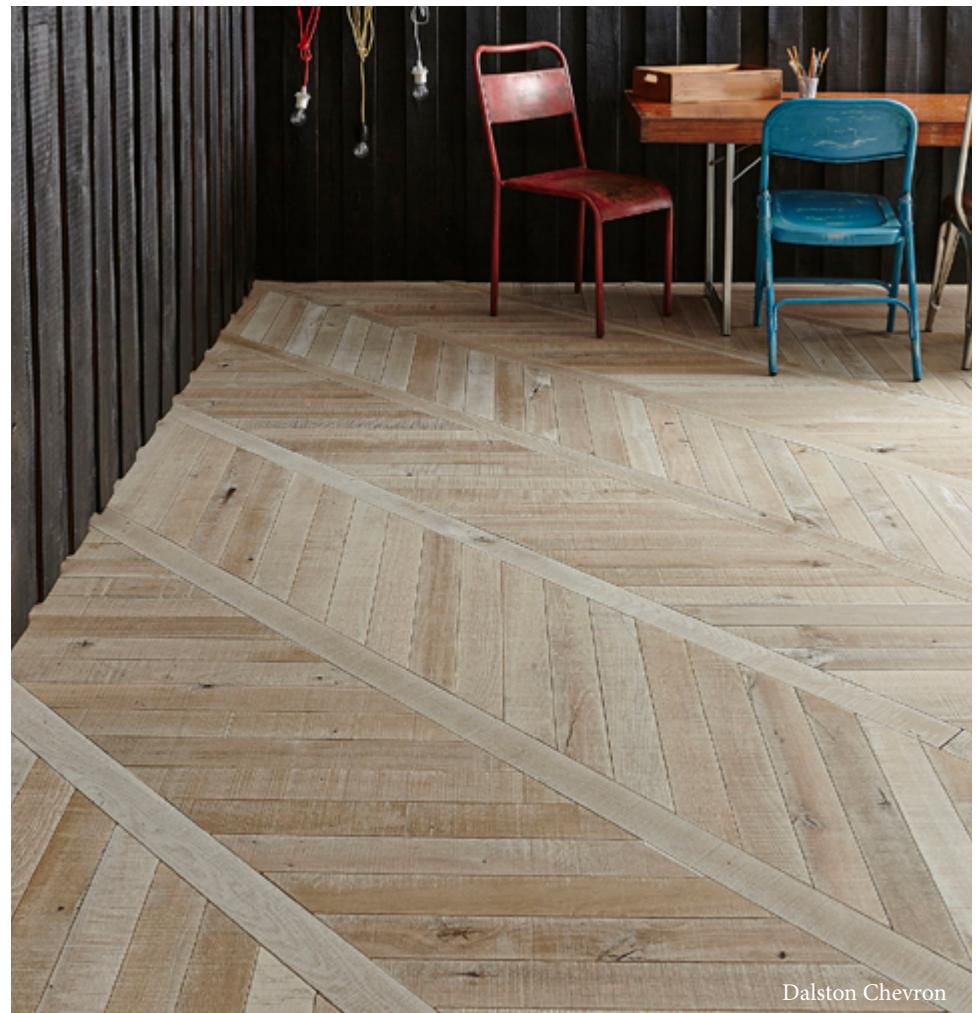

**RETRO APPEAL** The 80mm-wide planks are a take on the narrow wood strip floors of the 1950s and 1960s – take one look at their retro-style and you will see why we call them our 'skinny planks'. Combining different width planks creates an exciting design statement.

## WOODWORKS OAK

Please be aware that the grain features will vary, with knots, knolls and circling grains to be expected.

**ELEMENTS OF COPPER** We experimented with a copper leaf finish for an eye-catching and truly unique metallic finish that still fits with the rustic sawn effect of the urban boards. Our innovative design, which started its life in our experimental lab collection, has now become a staple of the Urban portfolio.

**NAKED SKIN LACQUER** A remarkable invisible finish makes these skip sawn chevron, herringbone blocks and planks extremely durable.

Dalston Chevron

# URBAN

**MIX AND MATCH** This flooring is perfect if you are inspired to **mix and match tones** ranging from **bold red to deeply-fumed tans**. Simply gorgeous!

**WOODWORKS OAK** Our oak from Europe is selected for its broad range of attractive **grain features**. For added impact in your interior, we source extra-long lengths in a selected nature grade for this collection.

**HAND FINISHED** So you can start enjoying your new floor as soon as possible, this is a fully-finished floor that does not need site finishing and is easy to maintain into the future. While the floor may have a worn look, **the finish applied to the wood and a 6mm wear layer, ensures it is extremely durable**.

**HONEST WOOD** For your long-term peace of mind, our **6mm hardwood wear layer is the thickest you can buy – and extremely hardwearing**.

**STABILITY** Our 2-ply engineered construction is reassuringly solid. That's because it features high-quality furniture-grade birch plywood.

**TRUST** For your peace of mind, this collection comes with **100% FSC®-certified environmental accreditation**.

**WARM FLOOR** This flooring is suitable for installation over underfloor heating (please see guidelines within Living With Your Floor document.)

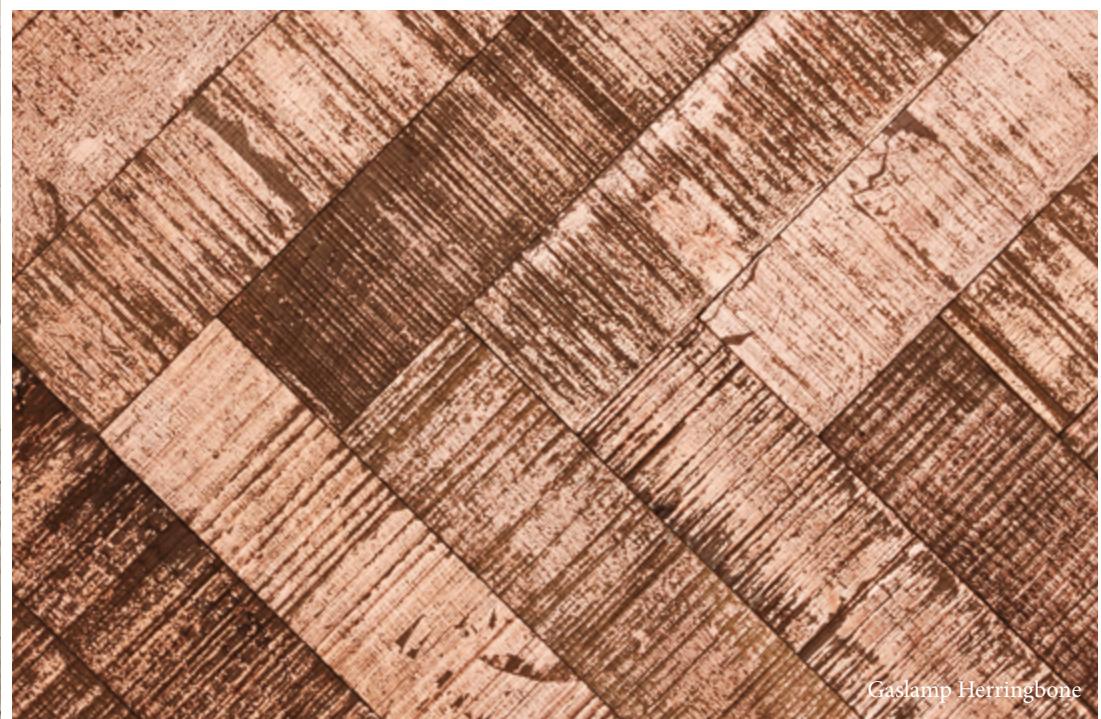

**EASY TO INSTALL** Depending on the project or site requirements, float, nail or fully bond this structural floor (Herringbone and chevrons fully bond only).

**HAND ROLLED EDGE** These floors are punctuated with a hand-rolled edge. Each corner and edge is carefully worked by hand, rolling a metal pin along each outer to create soft, aged edges. This edge detail gives a pillow effect to each element, for the most natural movement across the entire floor. This edge detail is much more traditional than a machine-created bevel and each element is unique as a result.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Hoxton.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

# SUPERFINE

**NAMING CONVENTION** The superfine collection is named after snails and larvae from nature.

**ELEGANCE** Our Superfine portfolio represents the perfect marriage between contemporary design, the finest materials and an extraordinary choice of delicate tones. These wonderfully long and wide superfine boards are just asking to be incorporated in impressive, understated interior design projects.

**SUPER-REFINED** This is a rare and difficult selection to source – but we put the hard work in to do so because your designs deserve the best.

**THE TRINITY OF EXCELLENCE** Superfine, super-wide (220mm) and super-long (up to 3m) with a 6mm wear layer is the ultimate combination. Clifton is also available in herringbone blocks. Superfine is also available in a nature grade for a more lively appearance or an extra long length superprime for the ultimate contemporary wood floor.

**PAINSTAKINGLY CRAFTED** Every Superfine board has been thoughtfully designed, patiently developed and lovingly handcrafted for you by Woodworks craftsmen.

**WOODWORKS SUPERFINE OAK** Superprime Oak is subtle, clean and contains minimal knots, sap and colour variation. Due to their challenging specification, there is only a limited annual allocation for Superfine planks. Only 1 in 1000 boards can be selected as superfine in such long lengths and wide widths.

**TONAL SELECTION** Choose from 24 tonal options to cater for every interior choice. These include many subtle and delicate tones that require huge skill and experience to create consistently. Fortunately, as pioneers in hardwood flooring, we have this skill and you benefit from it.

**HAND FINISHED** Rich, deeply polished Burnished Hardwax Oil is beautiful, durable and practical to live with. All finish options are slow cured for a natural feel that is very durable.

Risso Plank

# SUPERFINE

**POLISHED** We polish Burnished Hardwax Oil to achieve a gorgeous, rich patina. This burnishing gives unrivalled depth and protection to your floor. As the floor is used, it will softly matt over time. The floor can be re-sanded and re-finished to return to a previous look.

**SUBTLETY** Our carefully applied soft brushing techniques highlight the naturally open grain patterns to enhance the beauty of your floor. This also removes soft summer growth.

**ARCHITECTURAL ELEMENTS** A range of complementary skirtings, profiles, stair nosings and other architectural elements work perfectly with your floor and integrate it with other interior elements.

**HONEST** Our durable 6mm hardwood wear layer is the thickest available.

**STABLE** For your peace of mind, the 2-ply engineered construction of this floor is made with furniture-grade birch plywood for long-term stability.

**TRUST** For your peace of mind, this collection comes with 100% FSC®-certified environmental accreditation.

**WARM FLOOR** Superfine flooring is suitable for installation over underfloor heating (please see guidelines within Living With Your Floor document.)

**EASY INSTALLATION** Depending on the requirements of your site and project, you can float, nail or fully bond this structural floor.

**OUR MASTER CRAFTSMAN'S NOTES** 'It's an honour and a privilege to be entrusted with such a special timber. Because quantities are strictly allocated and limited, the pressure is on to make the most of the raw material. Every process has to be carefully considered, planned to perfection and executed with precision so we don't waste a bit of the precious timber. I hope you love what we achieve and enjoy it for years.'

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Auga.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

# PARQUETRY

**DESIGN** The skills in parquetry lie in the balance in the patterns you create. How the proportions work, how the patterns unfold across a space and finally how the finish complements all of this. Our Parquetry portfolio brings together exquisite designs and strong architectural statements. Choose from the beauty of end grain, exceptionally proportioned Parquet de Versailles, classic chevron or our very own specially designed circular patterns.

**PARQUET DE VERSAILLES** Our extraordinary Parquet de Versailles design is registered to Woodworks and cannot be found in any other floor, or anywhere else. We hand cut the elements within our panels and are the only creators in the world to match each element from panel to panel. These panels are crafted from the finest antique, reclaimed and new materials and are unmatched in quality.

**WOODWORKS INNOVATIONS** Note the deeply burnished end grains, Sapphire geometric panels made in aged oak and Inca, a simple design with an impact that gets better and better as your floor area gets bigger. These floors contain a wonderful amount of natural variation and should be styled with such in mind.

**FLOORS FOR COMPLEX SPACES** Many designs have the added benefit of unifying difficult spaces. For example, continuous Versailles, Sapphire Panels and chevron are just some of the designs that will help create natural flow in challenging spaces.

**WOODWORKS OAK** Oak from Northern Europe is selected for its wide variety of attractive grain features. This wood exudes character, and no two sections will ever be the same – representing the opposite of mass manufacturing.

**ARCHITECTURAL ELEMENTS** We've designed a range of matching skirtings, profiles, stair nosings and other architectural elements to complement your floor and enable its integration with other interior features.

**EDGE DETAILS** Parquetry contains many different edge details (hand-rolled, square shoulder, micro bevel) which all produce highly different looks. As these are hand applied and not machine-led, there will be a subtle difference from edge to edge. They will not be exact matches.

Sapphire Circular Panel

# PARQUETRY

**FUMED** A process which accelerates the natural darkening of Oak through oxidisation. Oak fumed for three months is fully oxidised and will result in a deep brown appearance. Lighter shades can be achieved by shortening the fuming time. Natural colour variations will occur, as in all Oak floors, however the darker areas will convey a greater amount of contrast when compared to areas that contain little tannins and are therefore less affected by this aging process. Sap and other low tannin areas do not darken and so will be highlighted as natural variation.

**DOUBLE FUMED** For a rich deep brown tone that goes all the way through the timber. This three month process oxidises the wood and accelerates the aging process. Sap and other low tannin areas do not darken and so will be highlighted as natural variation.

**LONG LIFE** For long durability and years of performance in your property, the 6mm hardwood wear layer on the 20mm option is the thickest available.

**STABILITY** Our 2-ply engineered construction is made with high-quality furniture-grade birch plywood.

**HAND CUT ELEMENTS** Each element of a parquet Woodworks floor is hand-cut and assembled into the final format by hand. This means that no two pieces will ever be the same and unique elements can be found throughout. Please also be aware that this means your flooring may contain small, different-sized gaps as these are not machine created.

**WARM FLOOR** All engineered floors in this collection are suitable for installation over underfloor heating (please see guidelines).

**IMPORTANT INSTALLATION NOTE** Herringbone, End Grain and panels are fully-bond only.

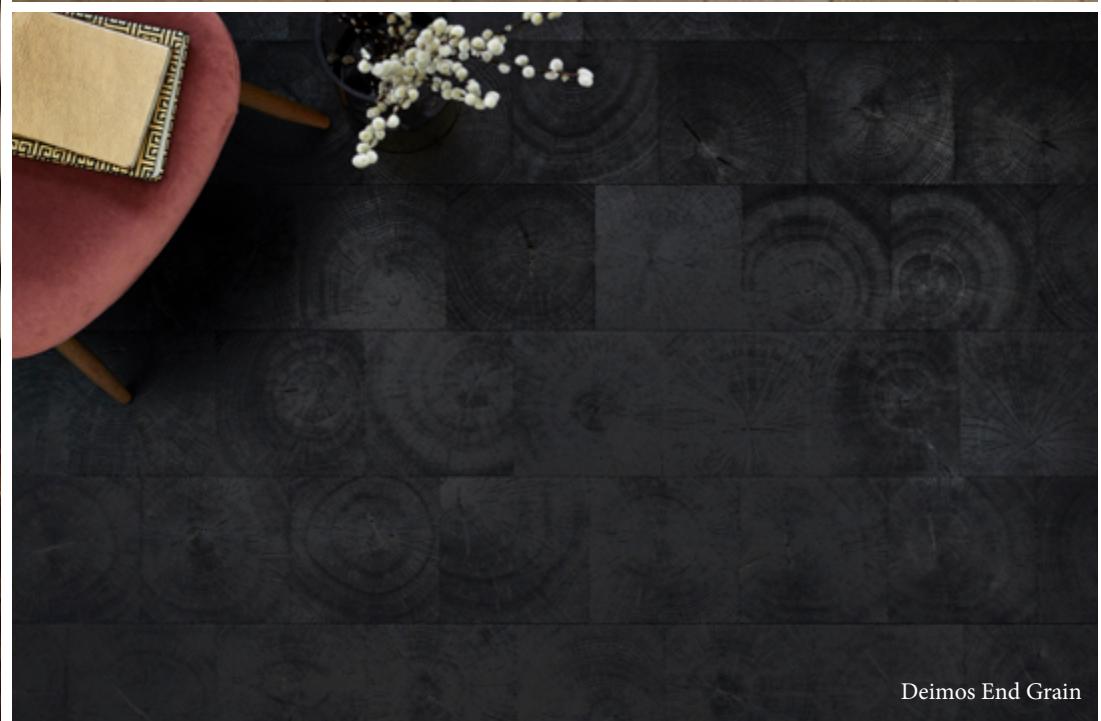

**TRUST** For your peace of mind, this collection comes with either FSC™, PEFC or UKTR environmental or alternative accreditation.

**OUR MASTER CRAFTSMAN'S NOTES** Sapphire is made of aged oak. This shows all the qualities of an aged floor, but in a stunning circular design. The beautiful proportions of all the elements are the result of many months of painstaking development – this design is registered to Woodworks'.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Sapphire.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

# GENUINE ANTIQUE AND RECLAIMED

# BOLD SURFACES

**PERSONALITY-PACKED** These antique and reclaimed surfaces are made using very special materials, adding soul and beauty to any space. The woods we use in this collection all have a strong identity and are all highly individual – no two pieces will ever be the same.

**RECLAIMED** These surfaces gained their textures from many years or decades of use.

**CRAFTED** Our team of craftspeople at our Cheshire workshops work to bring these personalities to life. They use a myriad of techniques to create what can be seen as works of art. All of our reclaimed floors are artworks and none are mass manufactured, so be prepared for a variety of features and looks throughout and single flooring or cladding choice.

**A STORY IN EVERY PIECE OF WOOD** The provenance and history of these woods imbues each piece with its own indelible story. Some have seen years of work in old farm buildings, while others tell of oak casks of bourbon. The stories of other woods are of French railway carriages hauling people and goods along the lines, or industrial Britain's warehouse floors being worn and bashed by the shoes and boots of generations of energetic workers as they built a long-gone empire.

**WOVEN** These are antique oaks that we've 'knitted' together to have a spectrum of rustic hues.

**EASY TO INSTALL** These are fully finished surfaces that need no site finishing; they are also exceptionally easy to maintain over the years ahead. Pretty much all you have to do is enjoy them.

Thread Cladding

# BOLD SURFACES

**LOCALLY CRAFTED** Your Woodworks floor is produced at our Cheshire workshops using the finest hardwoods sourced from Great Britain, Europe and North America.

**WONDERFUL WALLS** The tones and textures of the wood in this collection is perfect for use on walls. Choose which one will add impact and personality to your scheme. Don't be limited by how you can use these wonderful materials, walls and ceilings are just the start. Some of these surfaces are suitable for use as flooring, but not all can work with underfloor heating due to their solid construction.

**TRUST** For your peace of mind, this collection comes with 100% FSC®-certified environmental or alternative accreditation such as Genuine Antique.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Capitol.

PTO - Packed To Order

# CARBONISED

**NAMING CONVENTION** All Carbonised floors are named after natural minerals.

**YAKISUGI** is an age-old Japanese practice of using an open fire or controlled flame to preserve wood and add a striking visual and tactile quality by charring it. The term Yakisugi literally means ‘the burning of Japanese cedar wood. Although traditionally used for exterior cladding, wood treated by this process can of course be used for other striking applications. As this process involves the use of an open flame, no two section will ever be the same.

**ANCIENT CRAFT** Yakisugi involves charring wood, cooling it, cleaning it, and finishing it with a natural oil. It's not a process for amateurs or the faint-hearted – it's dangerous if not done correctly, requires precision and takes great skill and gives an entirely different feel from piece to piece.

**WOODWORKS YAKI SUGI** We were the first company in the UK to introduce Yakisugi floors with commercial finishes.

Since then we've expanded the collection to include more exquisite, subtle and elegant tones, all using reclaimed Swiss Pine and antique Elm.

All handmade from start to finish in our Cheshire workshops. Our take on Yakisugi is to combine this ancient technique with ancient timbers to give you boards that perform impressively, look amazing and are a sure-fire conversation starter with admiring visitors.

**CHAR PROOF ELM** Elm is a fireproof timber that was traditionally used for flooring on the first floor. The fire resistant properties of the timber protected the occupants of the building from fire. We use antique elm as these properties mean we can heat the wood to much higher temperatures and achieve a much deeper char that will look stunning as part of your interior design project.

**BRUSHED** The solid reclaimed Swiss Pine planks have been charred and then brushed to different intensities to create new subtle grey tones with an accentuated grain.

Whilst the primary colour of the floor is black, the silvered tones appear with different levels of intensity and are not consistent due to the handcrafting Yakisugi technique.

Jet PDV

# CARBONISED

**EVOLUTION** We've evolved this craft from simple planks to include intricate patterns in circular and geometric designs. If anyone can do it for you and your floor, we can.

**MOVEMENT** All these designs have gentle undulations that create visual 'movement' in a floor. This manifests itself as light shimmering across your floor – a completely different effect that goes way beyond conventional reflection. Each piece has its own individual shape and undulations, as opposed to the unfirming of mass manufactured alternatives.

**PARQUET DE VERSAILLES** Our extraordinary Parquet de Versailles design is registered to Woodworks and cannot be found in any other floor, or anywhere else. We hand cut the elements within our panels and are the only creators in the world to match each element from panel to panel. These panels are crafted from the finest antique, reclaimed and new materials and are unmatched in quality.

**STABILITY** These boards feature our proven 2-ply engineered construction (and the solid Augite) using furniture-grade birch plywood; you enjoy the reassurance of a hard-wearing floor that will delight for years.

**WARM FLOOR** All engineered floors in this collection are suitable for installation over underfloor heating (please see guidelines).

**INSTALLATION OPTIONS** Depending on your project or site requirements, you can float, nail or fully bond this structural floor (panels fully bond only).

**LOCALLY MADE** The concept of Yakisugi may come from ancient Japan, but your Woodworks floor will be crafted using traditional skills and the finest available hardwoods sourced from Great Britain, Europe and North America.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Obsidian.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

# ANTIQUE

**NAMING CONVENTION** Antique floors are named after famous figures from the past, including historic writers and explorers, amongst others.

**PROVENANCE** We have an international reputation for our skills in reclaiming and restoring antique wood. **The antique woods we restore can be many hundreds of years old and we take this responsibility very seriously.** This collection sources English oak and elm from the eighteenth and nineteenth centuries, French oak from ancient châteaus and railways, and long-leaf pines from the early industrial revolution. Naturally, every plank, block and panel is different from the next, even within the same product. We love to celebrate this unique nature.

**OLD GROWTH** The woods in this collection are from the oldest forests in the world, so you can only imagine the amount of change they have experienced. For thousands of years they were left to grow with little interference from man. Harvesting these woods was a one off event and the woods we reclaim, that came from these forests, are some of the rarest organic materials on earth.

**RESTORED** What really sets our antique floors apart is the time we take to restore the original worn face of the wood, a 20 stage process that results in a luxurious soft patina, elegantly original and utterly remarkable. We celebrate imperfections such as rusty nail holes and weather cracks (which appear at random throughout) and work hard enhancing our antique floors to ensure they look truly authentic. **We don't just reclaim these woods; we restore them.** To do this, we have two key tools: the hand and the eye. As we restore these floors, we do it with the same care that an archaeologist reveals hidden treasure. It's a careful, painstaking process and the results are stunning.

**CONNECTION** We connect to each piece of wood, to its unique peculiarities, lines and curls, wear and tear and innate beauty. And in doing so, we find ways to make its personality shine again.

**ELEGANCE** Our antique wood floors are elegant, gentle, subtle, timeless and refined. They look as if they have been lovingly cherished for generations.

**PARQUET DE VERSAILLES** Our extraordinary Parquet de Versailles design is registered to Woodworks and cannot be found in any other floor, or anywhere else. We hand cut the elements within our panels and are the only creators in the world to match each element from panel to panel. These panels are crafted from the finest antique, reclaimed and new materials and are unmatched in quality.

**MOVEMENT** The flow between each element is what we call 'movement'. The movement across our antique floors is a very important element and a true sign of originality with each movement being different.

Ruskin Plank

# ANTIQUE

**POLISHED** We polish, polish and polish again until the patina in your antique wood floor awakens. And then we polish it again.

**HISTORICAL ACCURACY** Our carefully researched and considered formats are all historically correct. Whether you invest in our random-width planks, Parquet de Versailles, Parquet de Chantilly, herringbone or chevron, you can be sure that they have all been crafted to be historically and dimensionally correct. These are all hand cut, and we are the only company who match elements from panel to panel across your entire floor.

**MAGICAL** The result has an obvious, but unquantifiable, quality. There's a real magic about these floors; you can feel it, but you'll struggle to define it.

**INTERNATIONAL CREDIBILITY** When you invest in these floors, you are sharing an interior experience with royal palaces and castles, Crown Estate properties, country estates, castles, the flagship stores for international fashion houses, fine London town houses, international hotels and restaurants that have been enhanced by our floors around the world since 1988.

**WARM FLOOR** All engineered floors in this collection are suitable for installation over underfloor heating (please see guidelines).

**EASY TO INSTALL** Depending on your project and site requirements, you can float, nail or fully bond this structural floor (Herringbone and panels fully bond only).

**OUR MASTER CRAFTSMAN'S NOTES** 'All our antique wood floors are very special indeed. It is very important to note that they are extremely difficult to sample. Most of our customers do not truly realise how beautiful their floor is until after it is installed. So looking at a small hand sample, or even a photograph of the floor, is not very insightful. We always recommend that you visit us to see for yourself how beautiful they are "in the wood". You will be impressed.'

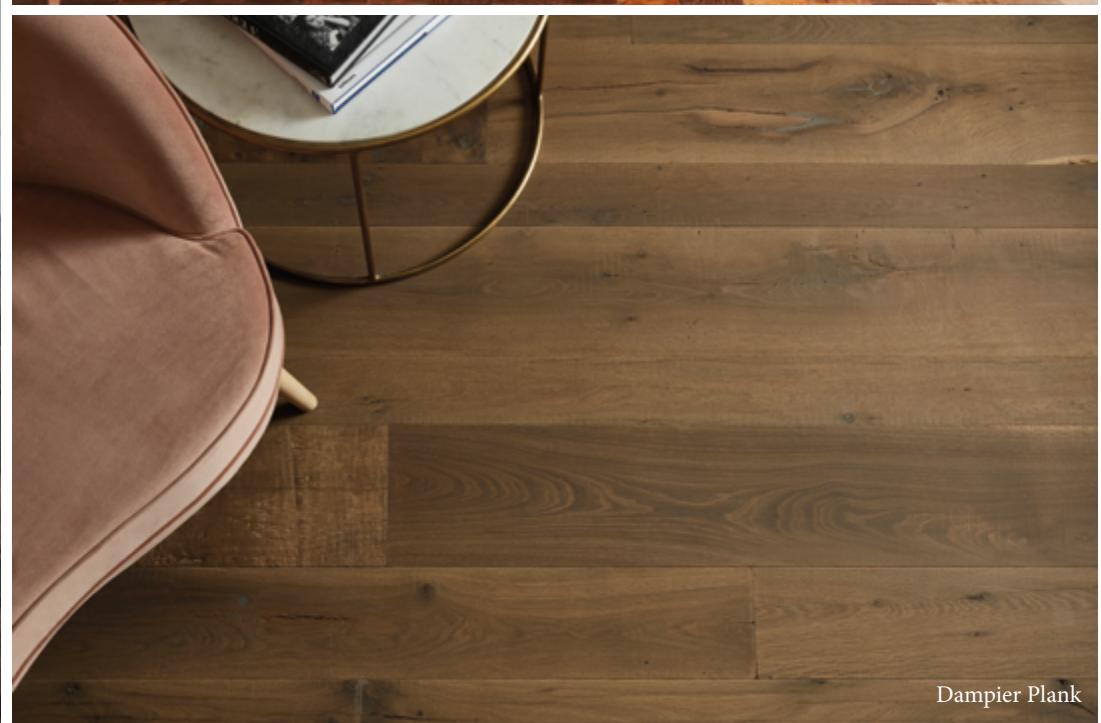

**LOCALLY MADE** Your Woodworks Antique floor is restored at our workshops in Great Britain with the finest reclaimed and antique woods from around the world.

**HAND CUT ELEMENTS** Each element of a parquet Woodworks floor is hand-cut and assembled into the final format by hand. This means that no two pieces will ever be the same and unique elements can be found throughout. Please also be aware that this means your flooring may contain small, different-sized gaps as these are not machine created.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Ruskin.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

# RARE FINDS

**NAMING CONVENTION** Rare Finds floors are named after the demolition site from which they were reclaimed, plus the species of the reclaimed wood.

**PROVENANCE** The wood in our Rare Finds portfolio has already been around for hundreds of years, often originating hundreds of miles from British shores. We've traced and acquired wood from the Old War Office, reclaimed genuine Teak floorboards from former Dutch East Indies homes. Having already been around for hundreds of years, these woods have experienced all manner of activity and have natural variation (both subtle and obvious) throughout the boards.

**GENUINELY ONE OFF** These really are one-off batches of wood flooring. There will never be another one like them. As the world becomes increasingly more urbanised, we all yearn to be closer to nature. An antique reclaimed wood floor provides a connection to the outdoors and the wonders of the natural world.

**STORIES** Everyone loves a great story. Each of these floors comes with a fascinating historical story, many of which are inextricably intertwined with the rise of Britain's great towns and cities, or our involvement in lands around the globe. These stories help to sell the floor and are encouraged to be told.

**RARITY** These woods are among the oldest surviving organic materials. They've survived fire, infestation, re-development, wars and unrest for hundreds of years, all of which impacts the look of the floor. This is a great achievement and to be in a condition where they are fit to be re-used as a floor is rare. However, we've managed: we even discovered some very old pitch pine with fire damage from a WW2 bombing raid!

**OLD GROWTH** The woods in this collection are from the oldest forests in the world. For thousands of years they were left to grow with little interference from man. Harvesting these woods was a one off event and the woods we reclaim, that came from these forests, are some of the rarest organic materials on earth.

**EXOTIC LOCATIONS** Many of these rare finds were brought back to the UK from former colonies to support the growth of industrial Britain.

Burmese Teak Plank

# RARE FINDS

**AGED** Many of these floors stood proudly for hundreds of years in ancient forests serving time in our warehouses and public buildings.

**PAINSTAKINGLY RESTORED** After we lovingly restore these floors, each finds a new home and a new adventure begins.

**FINDS** For almost 30 years, we have been discovering some of the world's most distinctive woods. They range from oily Burmese teaks in music theatres to hand-cut ancient oaks in nunneries; and from English elms in armouries to rare and irreplaceable long-leaf pine in astounding sizes. The density and beauty of these timbers puts modern woods to shame.

**A UNIQUE OPPORTUNITY** These woods are rare commodities. There are very limited stocks available, and once they are gone, they cannot be replicated.

**RUSTIC** Whilst we place a great deal of handcrafting and restoration techniques into these Rare Finds, the look remains very rustic and characterful, with imperfections and time-worn features appearing at random within the planks.

**BATCH TO BATCH VARIATIONS** Wood, being a natural material, has many imperfections and changes from piece-to-piece. This can be amplified through fuming (and other techniques), meaning that the colour and grain variation can be large across a floor such as Ruskin.

**SAMPLES** Samples of these floors will only represent a very small portion of the overall aesthetic and will not match every single piece. To best educate your customers, please encourage them to visit Design Centres in order to see the flooring in large sample panels. Our samples will also vary over time due to exposure to light and air, so older samples will not represent the current look of a floor and new samples will need to be issued instead.

# CARE SYSTEM 1

## FOR LACQUER BASED FINISHES:

Lacquers  
Hardened Oils  
Oilwood Traffic  
Naked Skin Lacquers  
UV Oils  
Fire Proof Lacquers  
Anti Slip Lacquers

## CARE SYSTEM 1 INCLUDES:

The kit contains: 1 x 1ltr Floor Care Easy Clean for regular cleaning of your floor,

1 x 1ltr Floor Care Polish to protect and revive your floor, 1 x maintenance mop head with high quality microfibre mop pad, (please note mop handle is not included) and 1 x pack of protective pads.

We also supply Intensive Polishes to protect your floor. Intensive Polish can be used on all lacquer based finishes. It is available in matt and gloss sheen levels and provides added protection in high traffic areas. Applying neat coats are great for rejuvenating tired floors.

Frequency	Process	Product
After installation and before handover	Vacuum & Clean	Floor Care Easy Clean
Weekly, or as required	Clean	Floor Care Easy Clean
Bi-Yearly or as required	Clean	Floor Care Easy Clean
	Protect	Floor Care Polish

## CARING FOR YOUR FLOOR

Your floor should be cleaned by diluting a cap full of Easy Clean in a bucket of hot water, then use a mop and bucket to clean the floor. Make sure you squeeze as much water as possible out of the mop before using it on the floor. (Fig.3)

To get off to the very best start, apply a neat coat of Intensive Polish before you start to use your floor. This polish is available in both a matt and gloss sheen level, it gives your floor added protection and it also adds a lovely lustre. (Fig.4)

You can purchase Care System 1 by going to [store.tedtodd.co.uk/floorcare](http://store.tedtodd.co.uk/floorcare)

## CARE SYSTEM 3 - For white toned lacquer based floors:

For white floors we recommend you use our white care and maintenance products available on our Floor Care Store – these specialist products are designed solely for white floors. For white floors with lacquer based finishes use Care System 3.

To check whether your floor requires Care System 3, please check the product details on our website.

# CARE SYSTEM 2

## FOR OIL BASED FINISHES:

Hardwax Oils

Natural Oils

Restoration Oils

Organic Oils

## CARE SYSTEM 2 INCLUDES:

The kit contains: 1 x 1ltr Soft Clean for regular cleaning, 1 x 1ltr Intensive Clean to give your floor a deep clean, 1 x maintenance mop head with high quality microfibre mop pad (please note mop handle is not included) and 1 x pack of protective pads.

We also supply Oil based finishes to replenish your floor and Hardwax Oils & Oils for when you wish to recoat them.

## CARING FOR YOUR FLOOR

Your floor should be cleaned by diluting a cap full of Soft Clean in a bucket of hot water, then use a mop and bucket to clean the floor. Make sure you squeeze as much water as possible out of the mop before using it on the floor. (Fig.5)

A light application of Oil Replenish will help you get the most out of your floor. It is 100% natural, easy to apply, and quick to dry. Apply, leave for 30 minutes, then buff it off. (Fig.6)

We always recommend that you trial a 150 x 150mm area before you coat the whole of your floor, this way you can check that you are not over applying the oil and that you are also happy with how it looks.

You can purchase Care System 2 by going to [store.tedtodd.co.uk/floorcare](http://store.tedtodd.co.uk/floorcare)

## CARE SYSTEM 4 - For white toned oil based floors:

For white floors we recommend you use our white care and maintenance products available on our Floor Care Store – these specialist products are designed solely for white floors.

For white floors with oil based finishes use Care System 4. To check whether your floor requires Care System 4, please check the product details on our website.

# CARING FOR A RECLAIMED FLOOR

Having already been used in projects throughout the centuries, reclaimed and antique wood requires careful maintenance to keep them looking their best. Here are some simple cleaning tips for your reclaimed floor:

## BURNISHED PATINA

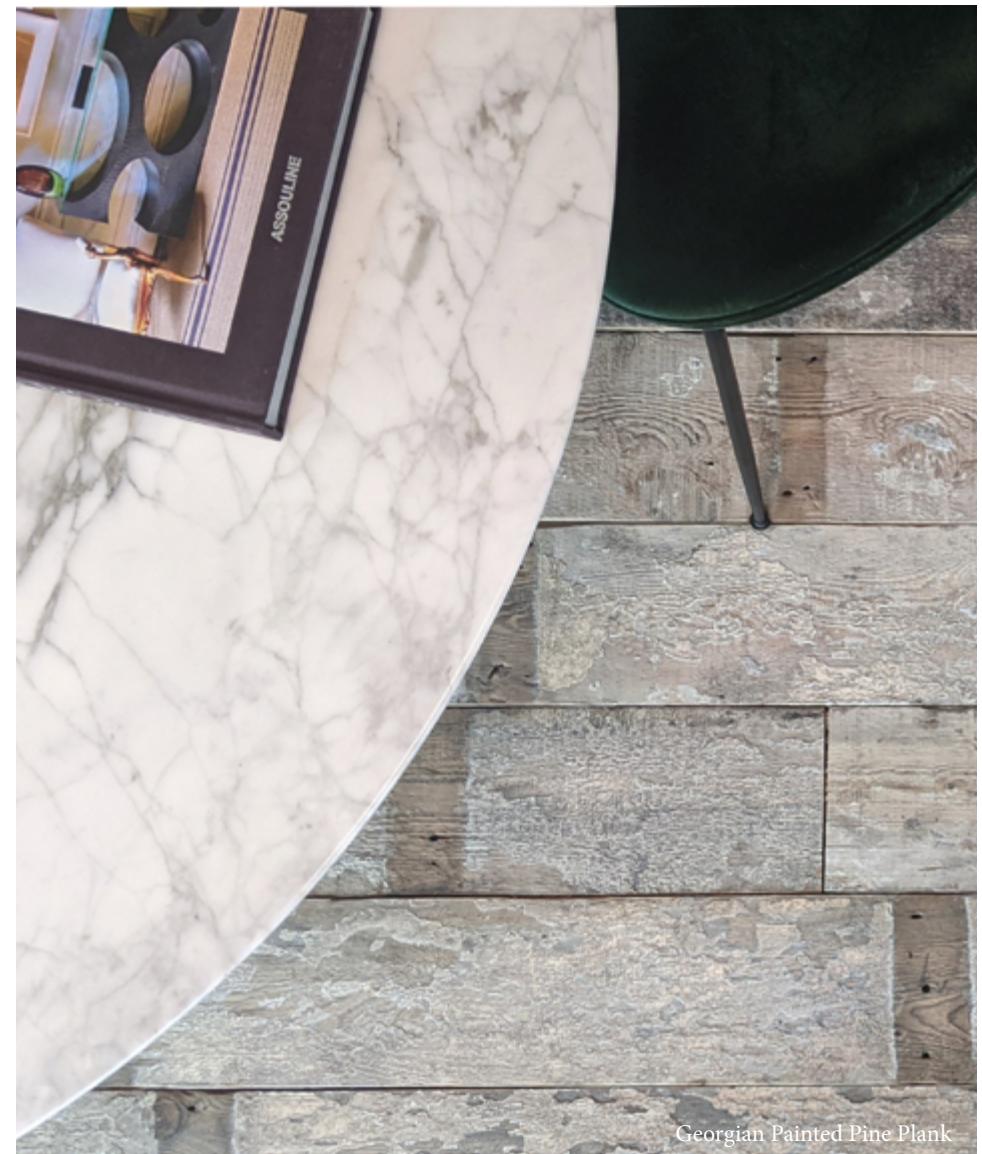

For original patina floors that have not had any finish applied – please Hoover on a regular basis and use our Floor Care Soft Clean. This will remove any excess dirt and also provide a diluted wax to the surface of the floor each time you clean it. Should you wish to give your floor a deeper clean please buff with a purple abrasive pad.

## HARDWAX OIL, NATURAL OIL & OIL WOOD TRAFFIC

Please Hoover on a regular basis and use our Floor Care Soft Clean. Please apply Oil Replenish if your floor starts to look dry. This a quick drying natural oil and it will feed your floor with waxes and oils that fill the pores in your floor. In the longer term, you have the option to strip all of the oil/wax finish off your floor with a dewaxing solution, leave to dry and then refinish your floor with your choice of oil based finish.

## NAKED SKIN LACQUER & SATIN LACQUER

Please Hoover on a regular basis and use our Floor Care Soft Clean. Please use one of our floor polishes to keep your floor looking fresh and to protect the floors finish. Our Intensive Polishes provide the highest protection and are available in a matt or gloss option. You can also mix them if you require. In the very long run it is always best to recoat floors before the finish has worn through. This way the existing finish can be screened back and additional coats of finish applied without the need to sand your floor back to bare wood.

Georgian Painted Pine Plank
